THE AVERAGE BRITISH FAMILY

Let me introduce my neighbours, Mr and Mrs Brown. They live in a semi-detached house in the south of England. They own their house which is situated in the suburbs of a large town. There are three bedrooms in the house. The Browns have two children and a pet. The family drives a two-year-old Ford Cortina.

The head of the family, John Brown, is thirty-five. He is a good-looking man, six foot tall, well-built, fair-haired and blue-eyed. He is quiet and thoughtful. Mr Brown works in the RIILFHRIDHQLHULQFRPSDQ\RUKRXUVDZHHNDQHDUO\SHUZHHNHVWDUWVDW 9.00 in the morning and finishes at 5.30 in the evening. He goes to work by car, which takes hLPPLQWHVHGRHVQ\SDUWLFXODUOLNHKLVMREEXWWKHUHDUHFKDQHVRISURPRWLR

His wife is four years younger. She is tall and slim with wavy brown hair and soft dark-brown eyes. She is kind and gentle. She works in a service industry for three days a week and HDUQ6KHZRUNVORFDOO\DQJRVWKHUHEEXV6KHTXLWHOLNHVKHUZRUNDVLWJHWVKHU RIWKHRXVHVKHPHHWVSHRSOHDQLWLVFORVHWRWKHFKLOGUHQVFKRO

Their son Michael is eleven. He is rather tall for his age and he looks like his mother. He is a clever boy and is good at nearly all subjects at school. In fact, he is one of the best pupils in his class.

His sister Margaret is only six. She is a lovely little girl with golden hair and dark blue eyes and a spirit that is alwDVEULJKWDQKDSSIXOORIMRDQJDLHW6KHLV\WIRQRIVWXG\ of any kind but she loves music and she dances very prettily.

The children go to a state school which is a few minutes from home. A special bus comes to pick them up every day. They are at school from 9.00 to 3.00.

The most popular evening entertainment of the Browns is watching television or video, which they usually do for two and a half hours a day. Two evenings a week Mr Brown meets IULHQVIRUDGULQNLQWKHORFDOSXE0UV%URZQ gardening and most weekends she puts on a pair of old blue jeans and potters in their small garden. The most popular sports are fishing, football and tennis.

BRITAIN¶S NATURE

With its mild climate and different ground Britain has various vegetation. When the islands were first settled oak trees covered the greater part of the lowland, giving place to pine forests on higher ground. In the course of the centuries that followed nearly all the forests were cut especially by the Anglo-Saxons to make more place for farming. Now only seven per cent of the territory is in the forest. The greater number of trees is in the north and east of Scotland, in some parts of south-east England and in Wales. The most often the following trees are met: oak and in Scotland pine and birch.

Typical of Britain is hilly moorland country. The moorlands and heath lands occupy about a fourth of the total area of the UK. They consist of the possibly true Arctic Alpine vegetation of some mountain summits in Scotland and the much more extensive peat moss, heather, bilberry and grass moss of the Highland zone. Similar vegetation exists on high ground in eastern Northern Ireland. In the Lowland zone, where light sandy soils are found, the vegetation is dominated typically by the common heather and sometimes by bilberry or bell heather. A strip of land immediately bordering the coastline has also largely escaped the

attention of humans and domesticated animals so that patches of maritime vegetation can frequently be found in approximately their natural state.

The animals of the British Isles look like those of north-western Europe, though there are fewer kinds. The survival of the wild mammals, amphibians and reptiles of the UK depends on their ability to come to terms with the changing environment and to protect themselves from attacks by their enemies, the most dangerous being human. Most of the formerly abundant larger mammals ± such as boars, reindeer and wolves ± have become extinct, but red deer survive in the Scottish Highlands and in Exmoor forest.

The carnivores (badgers, otters, foxes, stoats and weasels) thrive in most rural areas; also widely distributed are the rodents (rats, squirrels, mice) and insectivores (hedgehogs, moles, shrews). Rabbits are spread and their numbers are increasing. Amphibians are represented by three species of newt and five species of frogs and toads, while reptiles consist of three species of snakes, of which only the adder is venomous, and three species of lizards.
